Unit 3 / Lesson 2

# Build an About Me Page

Estimated Time: 8-9 hours

During this lesson you will be coding an "About Me" website based on this [example design](#). Open the example in your browser and bookmark it. You'll be referencing it throughout this lesson.

You will plan your page by creating a wireframe. From there you will build your "About Me" page from scratch using HTML and CSS skills. You'll create the page section by section during the lesson. Try not look at the finished code until the end.

You might occasionally experience frustration during this lesson, but stick with it. Solving problems you encounter will help you internalize your new coding skills. And just remember, by the end of the lesson, you will have created your own "About Me" page from scratch.
