Unit 3 / Lesson 2 / Assignment 7

Build the Middle Sections: HTML Walkthrough

 Estimated Time: 2-3 hours

Welcome back! As always, start by analyzing the wireframe.

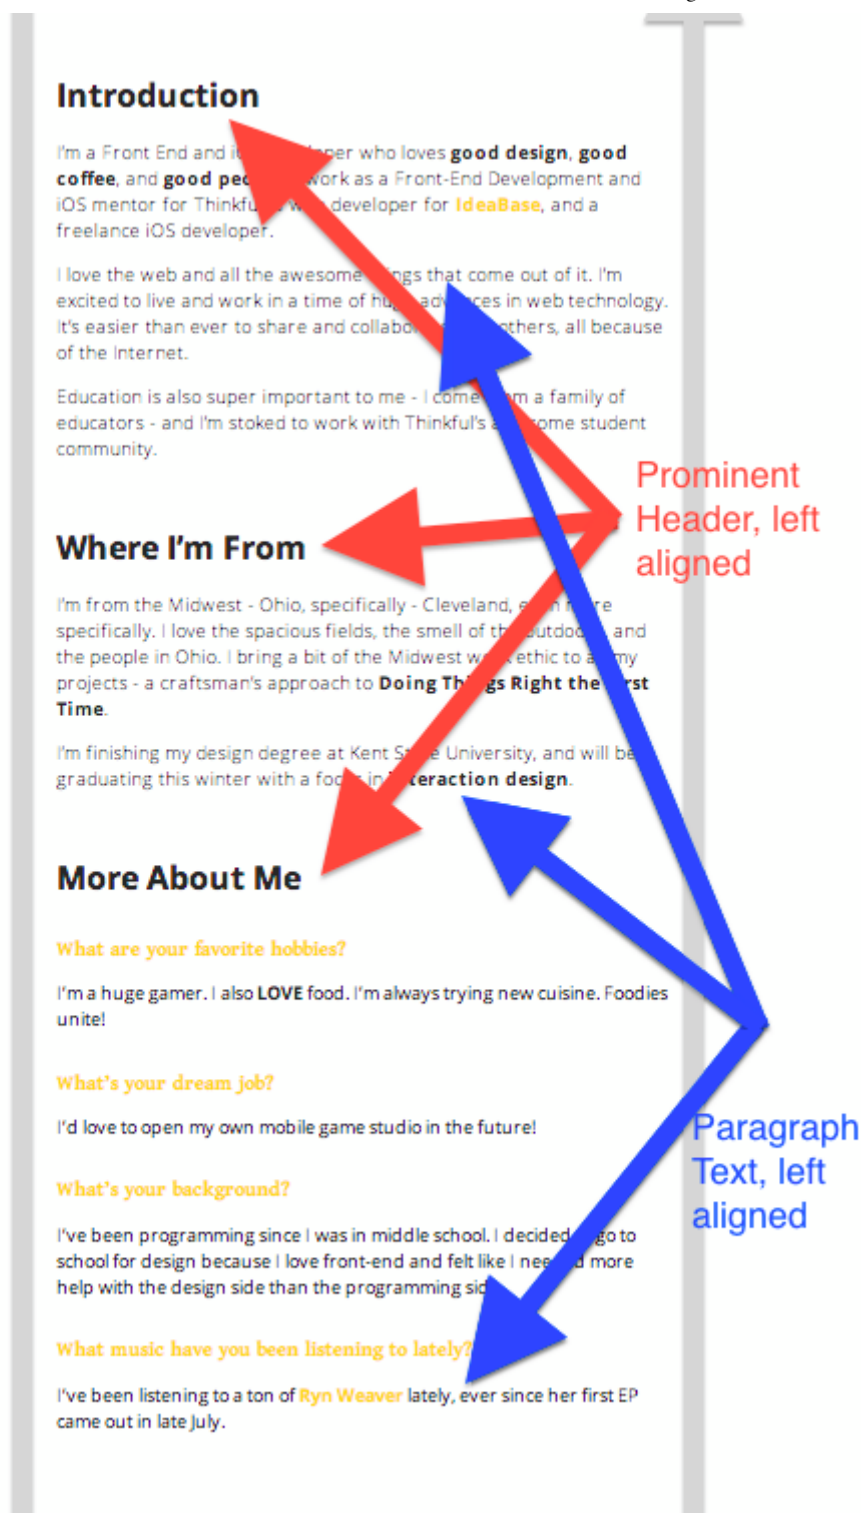

Analyze the wireframe

When looking at the design's three middle sections, there are a few things you should notice:

- The three sections are all marked with a prominent header and paragraph text.
- The last section titled, "More About Me" has sub headers.
- All of this content is centered in the middle of the page but the text is aligned left.

These observations will direct how you code these sections.

Coding

Go ahead and add the raw content into the HTML using `<h1>` tags for your prominent headers, `<h2>` tags for your secondary headers, and `<p>` tags for the paragraph texts. Make sure to use the same tags for the elements that are meant to look the same.

```
<section>
  <h1>Introduction</h1>
  <p>_INSERT_YOUR_3_SENTENCE_DESCRIPTION_HERE_</p>
  <p>_INSERT_WHAT_IS_IMPORTANT_TO_YOU_PARAGRAPH_HERE_</p>
</section>
<section>
  <h1>Where I'm From</h1>
  <p>_INSERT_YOUR_LOCATION_PARAGRAPH_HERE_</p>
</section>
<section>
  <h1>More About Me</h1>
  <h2>What are your favorite hobbies?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE_</p>
  <h2>What's your dream job?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE</p>
  <h2>Another question?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE</p>
  <h2>Another question?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE</p>
</section>
```

Add dedicated CSS class attributes to each section. For section one add `class="introduction-section"` . For section two add `class="location-section"` . For section three add `class="questions-section"` . Your code should now look like this:

```
<section class="introduction-section">
  <h1>Introduction</h1>
  <p>_INSERT_YOUR_3_SENTENCE_DESCRIPTION_HERE_</p>
  <p>_INSERT_WHAT_IS_IMPORTANT_TO_YOU_PARAGRAPH_HERE_</p>
</section>
<section class="location-section">
  <h1>Where I'm From</h1>
  <p>_INSERT_YOUR_LOCATION_PARAGRAPH_HERE_</p>
</section>
<section class="questions-section">
  <h1>More About Me</h1>
  <h2>What are your favorite hobbies?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE_</p>
  <h2>What's your dream job?</h2>
  <p>_INSERT_YOUR_ANSWER_HERE</p>
  <h2>Another question?</h2>
```

```
<p>_INSERT_YOUR_ANSWER_HERE</p>
<h2>Another question?</h2>
<p>_INSERT_YOUR_ANSWER_HERE</p>
</section>
```

Theory: When to add classes

Classes are powerful attributes, and should be used thoughtfully. When deciding whether to add a class attribute, think about what unique styling the element will have. If all of your Header 1's will look the same, there's no need to use a class for it.

Even if there were slight differences in Header 1's per section, always remember that CSS is "cascading". You can target all of the `<h1>` tags within a section without defining a separate class for them.

Using this guiding principle, you will not add classes for any of the `<h1>` , `<h2>` , or `<p>` tags for this project.
