Unit 4 / Lesson 3 / Project 3

Capstone V2

Estimated Time: 7-8 hours

Congratulations, you've come to the final assignment in this course! In the previous assignment, you completed V1 of your capstone project and got feedback from your mentor as well as two end users. Based on the feedback you received, in this assignment, we'd like you to refactor your application. This is also the moment to add tests. Specifically, we'd like you to add unit tests for your models, integration tests (if necessary), and acceptance tests for the main paths through your app. If you have time, we'd also like you to configure your app for continuous integration with Travis CI.

Like before, be sure to use Git/Github. And when you've completed V2, be sure to update the live version of your app. Finally, share your final product with your mentor, fellow students, family and friends, to show off all your hard work and the skills you've mastered in this course.
